

# MAESTRO Quick Start

## Battery testing

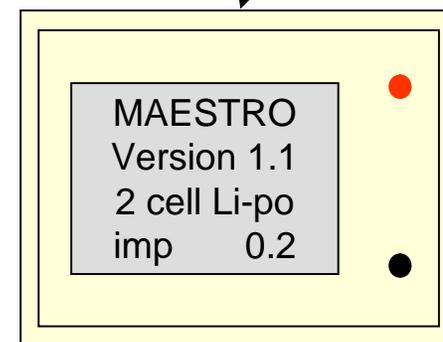

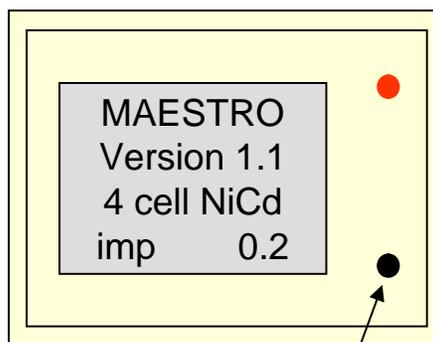

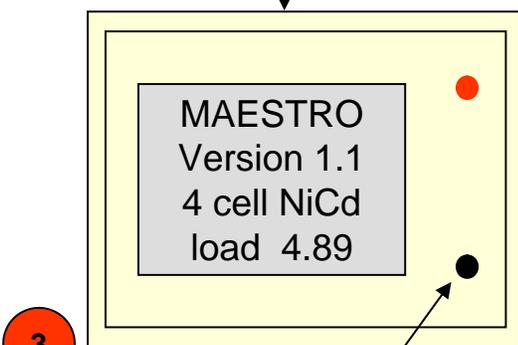

Red light comes on when the battery load is on.

1 Plug battery into either connector to test. An adapter is provided to allow you to connect two female connectors together.

2 Momentarily press this button to test the voltage under load.

Press and hold this button until the last two lines of the display turn blank then release the button. This will change to the second voltage profile mode.

3 Momentarily press this button again to calculate the cell impedance, or wait for 30 seconds.

4 Momentarily press this button one more time to return to noload battery measurement as shown in step 2.

*Please refer to the manual for detailed instructions.*
