Spartan 4.0 out of 5 stars That's how a modern factory radio should be. Cons Advertisement version seems to have better screen. Weak Tuner my factory radio was a little bit better, Crappy bluetooth microphone, people barely hear me. Streaming bluetooth music not as loud and clear as SD card or USB music, kinda buggy when you try to rise the volume while streaming music from bluetooth. Cheap construction materials, be careful handle it. Verdict Advertisement pics should be more honest not a big deal, Tuner needs to be improved beaten by a 2003 factory radio for a 2014 aftermarket radio it's just NOT Acceptable, Thankfully I'm not too much into listen to radio stations. Materials needs to be improve even if the price rise a little bit, that's ok Volume bugs while streaming music from bluetooth should be patched in latter versions not a big deal neither Besides the drawbacks which are not big deal Was a good option to replace my factory radio I think I make the right choice with the BOSS Audio 812UAB. Generally acceptable for now I may update if necessary Sounds a lot better than the factory stereo and bluetooth works really well better I think than most other cars I've been in range wise, easy as cake to set up bluetooth as well. Installing the radio wasn't too bad like I said I had to modify the plastic of my car's dash for it but I cut it so that it would just be press fit so I don't even have a mounting bracket or anything in there holding it in. Wiring was kind of a pain but I didn't get the wiring harness, I looked up the wiring diagram and spliced the wires up.

If it doesn't work for you in your explorer it might be because this doesn't have a power line for the factory amp mute blue wire in my explorer I just hooked that up to the same 12v ignition wire yellow black in the explorer that the radio also uses and works fine. It's hard to describe, but the buttons you push are actually a springy piece of plastic that pushes an actual button attached to a circuit board somehow. Those actual buttons are super cheap, so when you push them, it feels like you're pushing buttons on a TV remote from 1990. You'll probably regret switching your car's original stereo for this unless it was broken or something, but if your car stereo is broken or stolen and you need something on the cheap, this is a good bet. I'd save up, though. The ruin of this product is the removable face plate. It does not stay attached in a solid manner. The radio constantly stops playing because the face plate will not stay on tight enough for the electrical connectors to stay connected. So it is pretty much worthless. It took about 6 months for this to happen. I never remove the face plate, because crime is not an issue where I park it. I am now having to look for another radio. It also is not big enough to fill the hole left by a double din radio. Maybe it was just my car or something but it would not secure into place in my radio slot. I would constantly need to push it upwards or try getting it stay in place. The outer rim part was not staying on so all you would see was a weird gap with pieces of metal between the radio and the car. But I had no real problem with audio most of the time. The aux audio was decent. It's more like 12 watts x 4 RMS, or less. Random play doesn't work very well either. It will usually play the following song or the previous one, and if you press the advance button for the next song it turns off. The Bluetooth to my surprise works very well, whether talking on the phone or streaming music. For the price, it's really not too bad of a unit!

I just received mine today and finished installing it which took me an hour it's basic but with pretty latest outputs you really need. It's a good bang for your buck and you won't be disappointed. El puerto usb se deteriora junto al control de volumen al parecer por el calor. No se puede conectar directo porque el bluetooth no deja de usar la batería y la descarga. Two Bluetooth-enabled devices like a mobile phone and a car can be paired so that they establish a communication link when they come within range of each other. Depending on the device, the range can be anywhere from 3 to 300 feet. The 812UAB supports A2DP Advanced Audio Distribution Profile. A2DP is a Bluetooth profile that allows for the wireless transmission of stereo audio from an A2DP source typically a phone or computer to an A2DP receiver a set of Bluetooth headphones or stereo system. View larger Detachable Faceplate The face plate detaches and you can carry it with you. View larger Bluetooth HandsFree There is flip side to the Bluetooth Audio Streaming mentioned above. With this function you are able to answer your phone with just one press of a button. When the call ends you can either hang up first by pressing just one button again or do nothing at all as long as the person you were talking to hangs up first. Just keep on driving without any distractions. So basically a cable that has 2 3.5mm audio male plugs. Important Please beware that this feature is not the same as the "Full iPod Control". Please try again The factory amp was jumped and the sound became great. The little unit has its own amp I guess. 2 Then came the whining sound from the speakers when the engine is running. Nerve wrecking whines. Solved that by connecting a Noise Suppressor to the unit. 3 Call making via the unit became clearer with the Noise Suppressor and windows wound up. I have been using the unit for about three months and I cant get to suppress the feeling that the unit is not going to last for an awfully long time. Thats what you get for the price. Sorry, we failed to record your vote. Please try again Of course, it outside of Amazons time window for return so were out of luck as far as getting any kind of refund. Sucks. Dont buy this, unless youre only looking or a radio to work for 3 months time. Sorry, we failed to record your vote. My fault, but I have to mention upon installing there is a lip on top of the radio that serves as a place for the release button for the detachable face and to fill the top of the radio after attaching the face. This will break off quite easily if youre not careful when installing. It is only heard at very low volumes however and it is less noticeable while the engine is running and I am sure once I get used to it, I may not notice any longer. All other inputs I have tried seem to be clear. And thats it for complaints. All in all its as well built as its going to be for the price. If youre looking for a replacement for that old radio tape deck you were using to play your pandora or slacker from a smart device with a tape input device this is a very nice answer. It can use bluetooth, headphone input, usb and SD card and is totally demechanized. Even if the bluetooth stops working in a few years, you will always have the other inputs which arent likely to break. Ill update this post after using it for a couple months, but I am satisfied.
